Homework 3

hw03p04.cpp

For this problem I completed the following prompt:

“Try to write a program to multiply 2 matrices recursively. Try to provide an exit condition if multiplication is not possible. You can use either Python or C++, whatever you are comfortable with.”

I was unable to figure out how to do this recursively on my own, so I got some help from geeksforgeeks using the following link: <https://www.geeksforgeeks.org/matrix-multiplication-recursive/>

I was able to program the function arguments, matrix printing and matrix assignment on my own. However lines 15-37 were taken directly from the above link.
